How will e-mobility & V2G impact utility distribution?

Investment in utility distribution level networking is expected to grow steadily from \$1.8bn in 2019 to \$2.8bn in 2025. Solar has achieved grid parity level while Li-ion batteries will achieve \$500/kWh by 2025, 30% less than today. In parallel, e-mobility and V2G applications will increase the storage availability.

Why are microgrid component vendors moving from cookie-cut configurations to plug & play?

Microgrid component vendors are moving from cookie-cut configurations to plug&play modules thanks to global definition of application standards in AC and DC electrical architectures.

What is a power distribution sub-circuit?

The power distribution sub-circuit can flexibly define the user type according to the usage requirements and carry out up and down power control, metering and statistics according to the sub-circuit.

These products integrate the latest energy management technologies and environmentally friendly materials, aiming to promote the green transformation of communication networks from source to ...

This cabinet is ideal for renewable energy installations, microgrids, and energy storage systems that require efficient and quick switching between grid-connected and off-grid modes for backup power or ...

The ready-made solutions offer a cost-effective and convenient way to increase automation in the distribution network to improve the availability and reliability of power supply.

According to NREL, at the same capital expenditure cost of a plant based on 2.5MW diesel backup genset, a microgrid with 2MW of solar and 500kWh of BESS grants 80% more time of power autonomy.

Riteoptic integrated power system is a miniaturized power outdoor cabinet system for the communications industry. The power supply combines power, power distribution and batteries.

The indoor and outdoor cabinet systems enable smooth operation and their modular designs provide operational flexibility. They feature power supply, distribution, and protection equipment as well as ...
