There are a few ways you could define the edge of the Solar System - for instance, where the planets end, or at the Oort cloud, the boundary of the Sun's gravitational influence, where objects...

In this video, we break down the science behind this incredible boundary known as the heliopause. What created this fiery structure? How did the resilient Voyager spacecraft manage to ...

NASA's Voyager spacecraft discovered something extraordinary at the edge of our Solar System -- a superheated plasma "wall" reaching up to 50,000 kelvin. This region, known as the heliopause,...

NASA's Voyager spacecraft discovered something extraordinary at the edge of our Solar System -- a superheated plasma "wall" reaching up to 50,000 kelvin. This region, known as the ...

NASA's Voyager spacecraft discovered something extraordinary at the edge of our Solar System -- a superheated plasma "wall" reaching up to ...

A "firewall" at the edge of our solar system (heliopause, if you please) that registers temperatures of between 30,000 and 50,000 degrees? It's true, and we can thank Voyager 1 and 2 ...

NASA's Voyager probes have uncovered a searing-hot mystery at the edge of our solar system--a vast, invisible barrier hotter than most stars.

Now in interstellar space, these resilient spacecraft have sent back fascinating data, revealing unexpected conditions at the very edge of our solar system - including a region of ...
