How much does a server rack cost?

A full rack averages 3-5 kW or \$300-\$1,000 monthly. Hence, high-performance environments using 10-20 kW of power may spend between \$1,000 and \$4,000 each month. ServerMania's Montreal colocation facility, powered by 99% renewable energy, offers one of the lowest power costs in North America, making it ideal for energy-efficient operations.

How do I calculate the cost of a data center rack?

Our calculator does it for you. Simply choose one of our data center rack hosting options or enter your current colocation costs, fill the power input and the price of electricity per kWh. The result will be the total monthly cost associated with the rack or server space rental, connectivity and power consumption.

What is kilowatt per rack?

Kilowatt per rack (kW/rack) is the power assigned to a server rack in a data center. It is measured in kilowatts (kW) and represents the total power needed for all IT equipment in that rack. Colocation providers offer different power levels: Power density depends on server type, workload, and cooling efficiency.

What size is a server rack?

Classic server racks come in 42/47, less often 48-unit size. Each unit has a height of 1.75 inches. A single-unit server is always smaller so that it can be quickly put in or taken out of the rack. Keep in mind that first and last unit are rarely used because of their proximity to wires.

Find breakdown of Data center cost per racks unit, sqft and KWH, MWH, Cooling, DG & UPS from our data center cost calculator for small data center like edge and micro data center or Hyperscale Data ...
