Is chemical storage a promising option for long term storage of energy?

With respect to these observations, the chemical storage is one of the promising options for long term storage of energy. From all these previous studies, this paper presents a complete evaluation of the energy (section 2) and economic (section 3) costs for the four selected fuels: H₂, NH₃, CH₄, and CH₃OH.

Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).

How much does it cost to transport hydrogen?

Hydrogen in gas phase transported by pipeline is evaluated at 492 EUR/MWh H₂, and 239 EUR/MWh H₂ in liquid phase (in a truck). Storage of hydrogen in gas phase is the most expensive part of the process. This cost is due to the huge volume of storage required for 1 kg of hydrogen gas. The total cost of ammonia is moderate at 261 EUR/MWh NH₃, by pipeline.

Can electrolytic hydrogen be used as an energy storage alternative?

Benchmarking and selection of power-to-gas utilizing electrolytic hydrogen as an energy storage alternative. *Int. J. Hydrogen Energy* 41, 7717-7731. doi: 10.1016/j.ijhydene.2015.09.008 Wang, H., Zhou, X., and Ouyang, M. (2016).
