What is data center commissioning?

In the data center world, commissioning is a relatively new concept. Data center owners have even less of a clear picture of the purpose and value of this important process. Many owners lack an understanding of how, when, and why commissioning should be implemented as a part of the design/build of a new system or process.

What are the benefits of data center commissioning?

Commissioning can deliver a wide range of benefits for data center owners. When best practices are followed and the appropriate commissioning activities are specified, the data center owner will be rewarded with systems and assemblies that meet specific, well-documented project requirements.

What is level 6 data center commissioning?

Managed and executed by the Owners Commissioning Consultant, with support from the General Contractor, Level 6 is the final stage of the Data Center Commissioning Process. It involves transitioning the facility and its systems to the Owner and Facilities Team, ensuring complete preparation and optimized for operation.

Why should a data center be commissioned?

Commissioning can help to detect and correct these problems before the failures or outages occur. Commissioning is also the answer to a wide variety of other owner concerns such as ensuring the operations and maintenance (O&M) staff have adequate resources and training; improving the safety of the data center; and boosting data center efficiency.

The key to success lies in a comprehensive commissioning process that begins long before the first server powers up. By implementing a strategic approach ...

This guide focuses on the facilities themselves - the power, cooling, support systems, the physical structures that keep the environment for the computing infrastructure inside them ...
