What are solar energy cost benchmarks?

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read more to find out how these cost benchmarks are modeled and download the data and cost modeling program below.

How much does a DC/DC converter cost?

DC/DC converter for battery: The total initial cost of the studied DC microgrid is:14;511\$. As it can be seen from the result, for a DC microgridwith the same system specification as the AC microgrid, theinitial cost is lower.

How much does a PV system cost in 2022?

The current MSP benchmarks for PV systems in 2022 real USD are \$28.78/kWdc/yr(residential),\$39.83/kWdc/yr (community solar),and \$16.12/kWdc/yr (utility-scale,single-axis tracking). For MMP,the current benchmarks are \$30.36/kWdc/yr (residential),\$40.51/kWdc/yr (community solar),and \$16.58/kWdc/yr (utility-scale,single-axis tracking).

How much does community solar cost?

The MMP results are \$30.36 (residential),\$40.51(community solar),and \$16.58 (utility-scale). The community solar O&M cost is higher than the O&M cost for a single-customer commercial PV system of similar configuration because of the community solar subscriber management cost,which accounts for about 40% of the total community solar O&M cost.
