---

The Edge Computing Enclosure is a specialized protective housing designed to ensure stable operation of edge computing devices in harsh environments.

Edge Mobile Data Center combines Edge Computing with mobility for next-generation infrastructure. Optimized for AI workloads, GPU servers, and high-density computing environments.

KAYTUS" advanced system features a high inlet water temperature of 50°C and a primary-to-secondary loop temperature difference of 10°C, significantly improving heat exchange ...

Co-designing telecom power systems with MEC improves energy efficiency, reduces latency, and supports scalable edge computing for real-time applications. Modular, weatherproof ...

EdgeBLOK MDC - Micro Data Center solution is a package that provides power, cooling, monitoring, security and essential accessories into a single cabinet. ...

Edge Mobile Data Center combines Edge Computing with mobility for next-generation infrastructure. Optimized for AI workloads, GPU servers, and high-density computing environments.

House your entire edge computing infrastructure in a single secure, prefabricated micro data center cabinet with self-contained cooling, monitoring, & more.

It includes an uninterruptible power supply, power distribution, cooling, monitoring, and infrastructure management - consistently integrated, optimized, and developed from tried-and-tested components.
