What is on-site solar?

On-site solar refers to a solar energy system that is installed directly on the property where the energy will be used. This is the most common form of solar energy generation for residential homes and commercial buildings.

Why should you choose on-site solar?

**Control Over Energy Production:** With on-site solar, you have complete control over your energy production and usage. You can monitor system performance and make adjustments to maximize efficiency.

**5. Environmental Impact:** On-site solar reduces your carbon footprint by allowing you to generate clean, renewable energy on your own property.

Should I Choose on-site or off-site solar?

Choosing between on-site and off-site solar depends on your specific circumstances, preferences, and goals. If you have the space, budget, and desire to generate your own energy, on-site solar may be the right choice. It offers the most control, potential cost savings, and a direct impact on your property's value.

What is off-site solar?

Off-site solar, also known as community solar or solar farms, refers to solar energy systems that are installed at a different location from where the energy will be used. These systems are typically larger, centralized solar farms that generate electricity for multiple homes, businesses, or even entire communities.

Reduce utility costs, achieve energy independence and meet your sustainability goals by generating your own on-site power-and even selling surplus energy ...

Replace energy from your local grid with cleaner power from integrated on-site solar and storage systems. Generate and store electricity to protect against outages, avoid price spikes, and maximize ...

By adoption on-site solar power, you can reduce energy bills, eliminate exposure to market price fluctuations, optimize and valorize underutilized spaces like rooftops or carports to generate savings, ...

An onsite solar array can reduce your energy costs, eliminate energy cost volatility and enhance your own sustainability efforts by providing a tangible energy asset of your own.

Onsite solar is an asset located where the renewable energy generated will also be consumed. There are three main types of onsite solar: rooftop, ground-mount, and carport.

We deliver solar and energy storage systems for homeowners and businesses in Bozeman, Missoula, and communities across Montana. Our systems are built to last in Montana's rugged climate. With ...
