We produce 6061T6 custom aluminum extrusions for electric vehicle battery trays (some customers request 6082T6 aluminum). The 6061 extruded aluminum is ...

We produce 6061T6 custom aluminum extrusions for electric vehicle battery trays (some customers request 6082T6 aluminum). The 6061 extruded aluminum is commonly used as structural material for ...

When designing modern battery cabinets, engineers face a critical question: How can we ensure decades of reliable service in harsh environments? The answer often lies in battery cabinet ...

The carbon fiber reinforced composite (CFRP) battery casing of the NIO ES6 is 40% lighter than conventional aluminum or steel battery casings, has high rigidity, and has a thermal conductivity ...

Aluminum Alloys - Lightweight yet robust, perfect for mobile or weight-sensitive setups. Fire-Retardant Plastics - Enhance safety by reducing flammability risks in high-energy environments. Thermal ...

The new energy vehicle battery aluminum tray adopts 6061 aluminum plate. Which meets the performance requirements of high precision, corrosion resistance, high temperature resistance, ...

The new energy power battery shells on the market are mainly square in shape, usually made of 3003 aluminum alloy using hot rolled deep drawing process. ...

Aluminum alloy has become an ideal choice for lightweight and thermal management of new energy equipment due to its low density (about 2.7g/cm³), high strength, corrosion resistance ...
