---

Since the start of 2025, tech companies and data center operators have backed 12 solar deals, each adding more than 100 megawatts of capacity to the grid. Meta kicked off the year with a...

"Microgrids can quickly and cost effectively provide the bridge power that data centers need to come online and then [can] repurpose the microgrid to ...

Hybrid renewable energy systems could provide reliable and sustainable energy to data centres without grid access. The study finds that off-grid generation could deliver both lower costs ...

Implementing solar power in data centers and IT infrastructure comes with challenges. The initial investment costs can be significant, although ...

He and his colleagues got interested in the climate dilemma of data centers, and enlisted Scale Microgrids and Paces to help investigate. Our conversation has ...

In contrast, solar PV, hydrogen fuel cells, and large battery storage systems provide a practical, immediate alternative. This article examines how these technologies can cut operational ...

Since the start of 2025, tech companies and data center operators have backed 12 solar deals, each adding more than 100 megawatts of capacity ...

He and his colleagues got interested in the climate dilemma of data centers, and enlisted Scale Microgrids and Paces to help investigate. Our conversation has been lightly edited for clarity.
