What will a new solar facility do for the tube?

The contract will see a new solar facility built in Longfield, Essex, and renewable energy generated for the Tube. The facility will also support the decarbonisation of the National Grid and increase its renewable energy capacity.

Can FPV help decarbonise energy-intensive sectors?

FPV can provide an opportunity for behind the meter energy solutions which both reduce reliance and pressures on the grid network and could assist in decarbonising 'hard to decarbonise' energy-intensive sectors, particularly where a private wire solution can meet electricity demand and be deemed a suitable option.

Will FPV be supported by the UK government?

Action 53: The UK Government will consider further support for FPV by keeping under review how it and other innovative solar technologies are considered in the Contracts for Difference scheme. Any changes to the scheme would need to take into account wider impacts including costs to consumers.

How much electricity will a private wire network generate?

In the long term these private wire schemes could generate up to 64 megawatts (MW) of electricity for the network, which is approximately five per cent of the electricity needed to run the Tube network. The outcome of the tender will be announced once the process completes. Notes to editors

PVMARS's 1MWh energy storage system (ESS) + 500kW solar energy is an off-grid microgrid solution. Solar panels themselves cannot store a lot of electricity, so ...

Engineered with reinforced steel enclosure and IP55/IP65 protection class for dust, water, and corrosion resistance in severe climates. Combines high-voltage lithium battery packs, BMS, fire protection, ...

Large energy station: 1MWh outdoor energy storage cabinet cluster + EMS dispatching platform, realizing the superposition of grid frequency regulation, backup power supply and spot ...

EDF Renewables UK to begin construction work on a new solar farm in Longfield, Essex, from next year, providing green energy to the Tube, as well as decarbonising the National Grid and ...

PVMARS's 1MWh energy storage system (ESS) + 500kW solar energy is an off-grid microgrid solution. Solar panels themselves cannot store a lot of electricity, so the system uses photovoltaic panels to ...
