Why is Auckland Airport installing ground power units & pre-conditioned air?

Auckland Airport is installing ground power units (GPUs) and pre-conditioned air (PCA) systems at all international and domestic gates. These installations allow aircraft to connect to New Zealand's low-carbon electricity supply, eliminating the need to burn jet fuel while parked at the gate.

How will Auckland Airport's rooftop solar arrays work?

At Auckland Airport, the installation of rooftop solar arrays on the Transport Hub and Manawa Bay Premium Outlet Shopping Centre is underway. Combined, these solar arrays will produce 3.5 megawatts of energy, creating a resilient and renewable form of energy for the Airport precinct.

Are New Zealand airports ready for Electric Aviation?

Around New Zealand, airports are developing the necessary infrastructure to support the arrival of electric aviation. Kowhai Park, a large-scale solar farm initiative at Christchurch Airport, is setting the stage for sustainable aviation in New Zealand by supplying renewable electricity at scale for zero/low-emission flights.

Are airports setting sustainability benchmarks for critical infrastructure assets around New Zealand?

Airports are setting sustainability benchmarks for critical infrastructure assets around New Zealand. Decarbonising aviation is a critical mission for New Zealand. Domestic aviation accounts for 6.3% of New Zealand's emissions, which ranks us sixth in the world for total aviation emissions per capita.

In partnership with EV infrastructure company Thundergrid, the airport will use solar energy stored in a Battery Energy Storage System (BESS) ...

The report offers the most comprehensive snapshot to date of the state of New Zealand's airport infrastructure, identifying both the gaps that threaten future growth and the investment opportunities ...

GLASHAUS POWER - Industrial energy storage cabinets have become critical infrastructure for factories, commercial facilities, and renewable energy projects across Auckland.

The answer lies in a paradigm shift: treating energy management not as a background utility, but as a strategic pillar woven into the very fabric of airport design and operations.

Our new Battery Energy Storage System (BESS) will allow us to store solar energy captured during daylight hours and use it during evening operations. The state ...

Designed to support grid-tied and off-grid scenarios, the Hybrid ESS cabinet offers seamless integration and maximized space utilization, making it an ideal choice for growing energy demands.

The new \$50 million Pier B opened in October 2008 and was one of the first buildings in New Zealand to receive Leadership in Energy & Environmental Design (LEED) certification, a US qualification that ...

Designed to support grid-tied and off-grid scenarios, the Hybrid ESS cabinet offers seamless integration and maximized space utilization, making it an ideal choice ...
