CA Rule 21 is the Source Requirement Document (SRD) for DER interconnection within the state of California. In 2014, a process was created to promote and accelerate the integration and deployment ...

Support to the ongoing preparatory activities on the feasibility of applying the Ecodesign, EU Energy label, EU Ecolabel and Green Public Procurement (GPP) policy instruments to solar photovoltaic ...

The Institute of Electrical and Electronics Engineers (IEEE) Standard 1547, first published in 2003, has been a foundational document for the interconnection of distributed energy resources (DER) with the ...

To enable this integration, NLR is designing novel wide-bandgap smart inverters, developing robust control algorithms for better inverter ...

The standard defines the requirements for an automatic AC disconnect interface - it eliminates the need for a lockable, externally accessible AC disconnect. When will PV be competitive? Why is there such ...

Develop internationally-promulgated DER communication object model standards that will enable the strategic use of DER in ADA for functions such as Routine energy supply, peaking capacity, voltage ...

This implementation guides was a required outcome of Phase 2, 102 which prescribed IEEE 2030.5 as the default protocol for Rule 21 Smart Inverter communications.

Scope and object This International Standard applies to utility-interconnect ed photovoltaic (PV) power systems operating in parallel with the utility and utilizing static (solid-state) non-islanding inverters for ...
