We support projects from conceptual design through commercial operation and beyond. Our CAES solution includes all the associated above ground systems, plant engineering, procurement, ...

Promising approaches include improving technologies such as compressed air energy storage and vanadium redox flow batteries to reduce capacity costs and enhance discharge efficiency.

As Romania races to decarbonize its grid by 2030, the government's recent announcement about the pumped hydro storage tender has sparked intense interest. With bidding ...

The increasing need for large-scale ES has led to the rising interest and development of CAES projects. This paper presents a review of CAES facilities and projects worldwide and an ...

PDF | The paper presents the prototype of the first Romanian Compressed Air Energy Storage (CAES) installation.

Why Eastern Europe Needs Flexible Energy Storage As Romania aims to achieve 24% renewable energy penetration by 2030, the Bucharest compressed air energy storage (CAES) project emerges ...

Support schemes for battery storage systems in Europe remain a hot topic. Even though such schemes can provide a solid foundation for market growth, long-term success relies primarily ...

Compressed Air Energy Storage (CAES) offers potential, but faces challenges including poor efficiency and reliance on fossil fuels. In this context, the EU-funded Air4NRG project aims to ...
