Our Sun goes through what we call a "solar cycle" every 11 years or so. Then, the Sun's magnetic field completely flips! Learn more the solar cycle, what causes it, and why it lasts this long.

Solar cycle, period of about 11 years in which fluctuations in the number and size of sunspots and solar prominences are repeated. Solar cycle ...

One of the most striking features of the sun's activity is what astronomers call the solar cycle. This is an epic rise and fall in the sun's level of ...

This cycle is characterized by the rise and fall of sunspots, solar flares, and other solar phenomena. The solar cycle typically lasts around 11 years, with a period of high activity known as ...

Individual sunspots come and go, with lifetimes that range from a few hours to a few months. If a spot lasts and develops, it usually consists of two parts: an inner darker core, the umbra, and a ...

Our Sun goes through what we call a "solar cycle" every 11 years or so. Then, the Sun's magnetic field completely flips! Learn more the solar cycle, ...

One of the most striking features of the sun's activity is what astronomers call the solar cycle. This is an epic rise and fall in the sun's level of activity that repeats every 11 years or so. ...

The Sun's magnetic field goes through a cycle, called the solar cycle. Every 11 years or so, the Sun's magnetic field completely flips. This means that the Sun's north and south poles switch ...
