What are the primary category codes for Microgrid resilience and backup power projects?

Primary Category Codes for microgrid resilience and backup power projects include 81109,81110,81160,etc.

Revisions to this UFC will include additional category codes for networked standby power projects.

GLOSSARY.

What does a microgrid system do?

The microgrid system is responsible for transitioning to islanded power following a commercial power outage,as well as transition back to external power following commercial system restoration. Restoration time to supply power to all critical loads in the network is an important performance factor.

How does a microgrid design affect electrical system protection?

ELECTRICAL SYSTEM PROTECTION. A challenge related to the microgrid design is electrical system protection. A microgrid design includes protective devices that can identify faults and nearly instantaneously isolate the faulty circuit feederto prevent damage to the remainder of the circuit and to the system as a whole.

What is microgrid control design?

Microgrid control design must follow the published UFC for Cybersecurity of Facility-Related to assure that a cyber-attack on the grid does not Control Systems. The current approach relies on a more holistic strategy of building security in, not bolting it on. C-1 APPLYING RISK MANAGEMENT FRAMEWORK TO MICROGRID 4-010-06.

Contract between a federal agency and an energy service company (ESCO) to procure energy conservation measures (ECMs) without additional appropriations. Uses long-term ESPC authority for ...

Each developer / vendor / Engineering Procurement and Construction (EPC) contractor may have different processes, deliverables, and milestones than mentioned in the checklist. Steps also may ...

As communities nationwide increasingly turn toward microgrid technology, it is critical to consider system design, development, and financing via federal funding sources to ensure a project's ...
