How will Spain increase its energy storage capacity?

Spain has launched an ambitious EUR700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems.

What is energy storage in Spain?

It targets large-scale energy storage projects in Spain. It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage. The program supports hybrid projects, which combine storage with renewable energy, such as solar or wind farms.

Why should Spain invest in energy storage?

Investing in energy storage helps Spain meet its climate goals. This includes achieving carbon neutrality by 2050. Storing renewable energy instead of wasting it helps the country rely less on fossil fuels. This also cuts down greenhouse gas emissions. Pumped hydro, thermal storage, and battery systems are effective technologies.

Does Spain have a high electricity demand?

Nearly all autonomous communities in peninsular Spain increased their electricity demand compared to the previous year. Seven of them (Aragon, Asturias, Cantabria, Castile-La Mancha, Galicia, Murcia, and Navarre) recorded growth rates above the national average (3%, 3.2%, 7.2%, 3.3%, 5.2%, -3.4%, and 1.8%, respectively).

Thermal storage can be competitive by 2025: By 2025, there are thermal energy storage (TES) assets already competitive with existing technologies by only charging in the hours of lowest ...

Spain's energy storage market is at a tipping point. Investor interest is intense, regulatory developments are on the horizon and the country's ...

By 2030, Spain expects to install 22.5 GW of energy storage projects, including included battery energy storage, pumped hydropower and solar thermal plants. The plan also aims for 76 GW of solar power, ...

Storage reached record levels, both in consumption (8,666 GWh) and pumped-storage turbine generation (5,459 GWh). These figures are 5.8% and 4.9% higher than in 2023, exceeding ...

storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes ...

The selected projects range from large-scale battery systems to industrial thermal storage and new pumped-hydro plants, reflecting both the technological maturity of the sector and ...

Battery energy storage systems accounted for 124 of the selected projects, while 17 involved thermal or power-to-heat storage and three were pumped hydro sites.

As per the UNEF, nearly 495 MWh of behind-the-meter energy storage capacity was successfully installed across Spain in 2023, with the residential sector accounting for 75% of the total number of ...
