How much energy can a refinery save?

Identified actual energy savings of about 9% in refining operations over a decade. Demonstrates the proven effectiveness of structured, long-term energy management. A review of three complex refineries using Best Technology assessments and Pinch Analysis. Identified potential fuel savings of up to 215 Gcal/h (853 MMBTU/h).

How can refineries improve sustainability?

By broadening the scope of sustainability metrics, refineries can develop more comprehensive and responsible optimization strategies that not only reduce energy consumption and emissions but also address water conservation, waste reduction, resource efficiency, and social responsibility.

What is the largest energy consuming process in a refinery?

In fact, it is estimated that the CDU is the largest energy consuming process of all refinery processes (see chapter 4). Energy use and products of the CDU depend on the type of crude processed.

How much electricity does a refinery use?

In the petroleum refining industry, roughly 59% of all electricity use in motors is for pumps (Xenergy, 1998). This makes pumps the single largest electricity user in a refinery, consuming 48% of the total electrical energy used in a refinery. Pumps are used throughout the entire plant to generate pressure and move liquids.

On-site renewables, like battery storage and solar-plus-storage, can play a strategic role in mitigating the impact of rising energy costs and hedging against future price fluctuations--all ...

SLENERGY, a leading innovator in energy storage technologies, has developed advanced cabinet solutions that address the demands of the next-generation energy landscape.

This comprehensive guide examines the importance of energy efficiency in oil refineries, addressing the challenges faced and innovative ...

A comprehensive, interactive deep-dive covering every facet of energy conservation in petroleum refining--from high-level benchmarking to equipment-specific strategies and the policies ...

A very detailed, workable approach to improving energy efficiency and cost effectiveness in petroleum processing, dealing with the role of management and refinery ...
