Do cabinets need a UL listing?

For example in some applications in Canada the Canadian National Fire Code may require cabinets to carry a ULC listing which requires a more stringent fire test than UL Listing. While NFPA does not mandate requirements for the storage of nonflammable acids and corrosives these chemicals should be properly stored for maximum safety.

How many liters can a cabinet hold?

Under counter countertop wall mount and piggyback / stackable cabinets add to safe storage even when space is at a premium. For high capacity storage including storage of 55-gallon drums larger sized cabinets designed specifically to house 30-gallon (114 liter) or 55-gallon (208 liter) drums are available.

Are safety cabinets NFPA approved?

Safety cabinets come with different safety ratings. They can be NFPA OSHA EPA or FM approved and U UL or ULC Listed. Ratings are important considerations for meeting local state regulations. Most of our Justrite and Eagle Cabinets are listed under various regulation codes and are approved for special uses.

Are self-closing safety cabinets required?

While regulatory codes do not mandate the specific color industry has customarily observed certain colors for defined liquids: Self-closing safety cabinets are required by certain states and certain districts within states that follow an adopted Fire Code (such as the International Fire Code (IFC) or NFPA 1 Uniform Fire Code.)

Find out the best production and assembly line safety equipment for keeping personnel, property and inventory safe and secure from common workplace ...

By keeping hazardous materials securely stored and separated from heat or spark-producing equipment, explosion-proof cabinets help create a safer, code-compliant work environment.

They resist weather conditions better, are available with clear covers or windows for viewing contents without opening, and are ideal for housing instrumentation, controls, and sensitive equipment.
