Are climate controlled cabinets a good investment?

Climate controlled cabinets are a smart investment for your electrical or electronic equipment assets. Heat and humidity are two of the biggest threats to the life of your electrical or electronic equipment. Bison ProFab can help combat heat and humidity damage to your equipment with the properly cooled enclosure for your application.

What are the construction and design requirements for safety cabinets?

Construction and design requirements for safety cabinets are outlined in NFPA 30, Flammable and Combustible Liquids Code and various OSHA regulations. Safety cabinets must be made of double-walled, 18 gauge (1mm) steel with 1 1/8-in (38mm) of insulating air space at the bottom, top, doors, and sides of the cabinet.

What corrosive cabinets are available?

Multiple colors and sizes available. Use corrosive safety cabinets to store flammable and non-flammable acids and corrosive liquids. All interior and exterior surfaces, including shelves, are finished with blue epoxy powder coating. HDPE corrosive cabinets are also available.

What is a good temperature for a semiconductor?

The rule of thumb for semiconductors states that increasing the component temperature by 10 K in relation to the maximum permissible component temperature reduces the part's service life by 50 percent. A constant temperature is therefore the best prerequisite for a long service life and high reliability of all the electronic components.
